Introduction

We advise you to make a back-up before loading the release upgrade & to install the new release in a testing environment first.

This release can only be loaded on OS400 V6R1M0 or higher. Active support for older releases will be discontinued. Should you still work with an older release (e.g. V5R4M0), we advise you urgently to purchase a new release as soon as possible. In return you will be given full support. Those who have purchased an IBM Software Maintenance Agreement, are able to acquire the most recent release without any further charges.

Loading instructions for FMS Release 2015.01 Upgrade

This document describes the process of installing the software on the IBM Power System server. You can download the FMS Release 2015.01 Upgrade from the UNIT4 Customer Portal (<https://my.unit4.com>); it consists of the following components:

FMS1501000.iso Software for the IBM Power System

The IBM Power System software must be loaded in an image catalog on the server using the instructions from the 'Load ISO file' document. This document can be found on the [Customer Portal](#) of UNIT4 (under the 'Producten' menu).

You can burn the ISO file on a CD-ROM.

Installation preparations FMS Release 2015.01 Upgrade

Before installing this release upgrade, you must verify on <https://my.unit4.com> whether there are any significant installation details. Before you install the new release, you must go through the following steps and, where relevant, execute the specified commands.

Step	Action
------	--------

- | | |
|---|---|
| 1 | The download contains the upgrade version of FMS Release 2015.01. You can only use it, if at least FMS Release 8.01 has been installed on your system. The upgrade version of FMS 2015.01 also contains the English and German language modules. These will automatically be installed during the upgrade installation, when applicable. |
| 2 | Make sure you set aside enough time for the installation procedure. |
| 3 | Define the following system values: <ul style="list-style-type: none">• The value specified for 'Action in the case of full job message queue' (QJOBMSGQFL) must be *WRAP. This means that when the job message queue is full, the oldest data in the queue are overwritten.• The 'Maximum amount of data in job message queue' (QJOBMSGQMX) is equal to 64 MB.• The 'Initial size job message queue' (QJOBMSGQSZ) must be at least 16000 KB.• The 'Maximum initial size job message queue' (QJOBMSGQTL) must be at least 16000 KB. When you use these system values, you ensure that the job log does not fill up and cause the installation procedure to be aborted during the upgrade installation.• The value specified for 'Allow Restore of Security-Sensitive Objects' (QALWOBJRST) must be *ALL or *ALWPGMADP. This indicates whether programs and service programs which have been granted temporary authority, can be restored. |

You use the WRKSYSVAL command to define these system values. On the 'Work with system values' screen, type the QJOBMSGQ value in the 'Search for' field and then press <Enter>. The above-mentioned system values are displayed on the sequel screen. You can use option 2 (= Modify) to enter or adapt the relevant values. After adapting these system values, you must always log off and log on again, since the new values will not apply to the current job.

- | | |
|---|--|
| 4 | Install after the release upgrade the last available PTF for FMS Release 2015.01, which can also be downloaded from our Customer Portal. |
|---|--|

Uploading FMS Release 2015.01 Upgrade to your IBM Power System

This release upgrade of FMS 2015.01 can be downloaded from the [Customer Portal](#) of UNIT4.

It consists of the **FMS1501000.ISO** file. This file contains all IBM Power System software. You can decide to burn the downloaded file to a CD and to insert this CD into the optical device of your IBM Power System. Please continue with the 'Installing FMS Release 2015.01 Upgrade' chapter.

You can also store this downloaded file in an **Image Catalog** on your IBM Power System. An image catalog is an object type which stores ISO images of CDs/DVDs in the IFS (Integrated File System). An image catalog can be considered an optical device which has been installed on your IBM Power System.

The procedures of creating an image catalog and loading ISO images have been included in the 'Load ISO file' document. This document can be found on the [Customer Portal](#) of UNIT4 (under the 'Producten' menu).

Installing FMS Release 2015.01 Upgrade

The following is a step-by-step summary of the loading procedure:

Step Action

- 1 The upgrade must be loaded from an Image Catalog (virtual optical device). The upgrade can also be performed using a burned CD-ROM.
- 2 Log on with the user profile QSECOFR (= Security Officer).
- 3 Make sure that there are no active users and batch jobs in FMS. Please recall the batch jobs and links via APIs. Please ensure that the mail agents of FMS Online Approval have been terminated.
- 4 If you are using or working with FMS Client Reporting, you must exit the subsystem SOCKS by means of the command: ENDSBS SBS(SOCKS) OPTION(*IMMED). After you have completed this installation, you must relaunch this subsystem by entering the command: STRSBS CONSYST/SOCKS.
- 5 Enter the command LODRUN DEV(OPTxx) <Enter> (OPTxx is the name of your CD-ROM or virtual optical device; e.g. OPTVRT01).
- 6 Select the Production or Test version. This step is only of interest, if two FMS versions share the same system. The screen below is only displayed, if more FMS versions have been added to the system. You can update the test or production environment only, when no users and/or jobs are active in both environments.

```
@FEXSRR      Kies versie / Choose version      Kiezen  QSECOFR      13/08/14
                                           QPADEV002B 13:36:20
```

```
Kies optie, druk op <ENTER> / Choose option, press <ENTER>
1=Selecteren/Select
```

Versie/Version		Release-PTF
1	Production	R08M01032
2	Test	R14M01004

```
F3=Installatie afbreken/abort installation
```

Step Action

- 7 Select the installation language, if the 'Select language code' screen appears. If you had already installed an FMS language module on your system, you can now no longer select an installation language module. Messages are displayed in English.

@FHLDFI	Select language code		QSECOFR	13/08/14
	UNIT4 Business Software		QPADEV002B	13:37:14
	Language code	Country code	Language code description	
Make selection, press enter				
1=Select				
	de	DE	Deutsch - DEUTSCHLAND	
	en	GB	English - UNITED KINGDOM	
1	nl	NL	Nederlands - NEDERLANDS	
F3=Exit				

Step Action

- 8 The upgrade procedure is started. Messages inform you about the installation status.
- 9 Log off with the command SIGNOFF *LIST. Preserve the job log for some time.

Now always load the most recent PTF for FMS Release 2015.01. This can be downloaded from our portal at <https://my.unit4.com/Login>. Its installation procedure is described in the loading instructions of the corresponding PTF.

You cannot work with FMS Release 2015.01 for which you have not installed a single PTF.

Support

In order to guarantee the continuity of your company results, UNIT4 Business Software supplies various types of support. What to do if you want to make use of these facilities?

- For a problem involving UNIT4 standard software, you are requested to contact the Service Desk via our portal (<https://my.unit4.com>). Upon logging on, your data will be made known to us. A concise problem description suffices to tackle your software issue (within opening hours).
- Support during the installation and/or implementation of UNIT4 software products is available on request. You are requested to timely contact our Project Office, preferably two weeks before the installation. This type of support can be given at any time (during/after business hours), on location or by phone. For this type of support fixed tariffs apply.

You can reach the Project Office by phone at **+31.88.2471434**. Should you require additional information on other types of support, such as training and advice, please do not hesitate to contact our Project Office.
